#### INNOVATION CENTER\_IIT

The design stimulates the development of break-through projects and technologies. The Innovation Center will reflect and encourage innovation, by providing environments to refresh and inspire the minds of the people living and working within IIT. These environments are a direct reflection of the overall atmosphere of the IIT campus. As the students progress through the building, various activities open up possibilities to explore, not just academically. This opens the possibility for experimentation, testing, and innovation-related activities to extend outside of the building. Each environment serves as an independent unit for the ability to change through a "loop". But, at the same time, the building is seen as a larger unity with a continuous circulation landform and communication system between the areas. This "loop" of connectivity carves into a volume that is stacked with the core program. The volume is organized by the existing grid of the campus, but unlike the surrounding buildings, it reflects the atmosphere that students created over the years.
